

Greenhouse Environmental Control

Greenhouse Environmental Control System is consisted of ventilation fans, evaporative cooling pad, air circulation fans, and heater. They are installed in the greenhouse to against the cold weather in winter and hot weather in summer, and protect the plants growing in the greenhouse.

The cooling pad and ventilation fans can reduce the high temperature and make the air flow in the greenhouse. The heater and air circulation fans adjust the temperature and circulate the heating in the greenhouse.

Automatic Heater for Greenhouse

Automatic Oil-Burning Heater

Automatic Temperature Controller

Adopt three-pass design. Automatically return dust in the exchanger.

Automatic protective device with automatic alarming function.

Forced draft fan and air blower can be opened and closed automatically or manually.

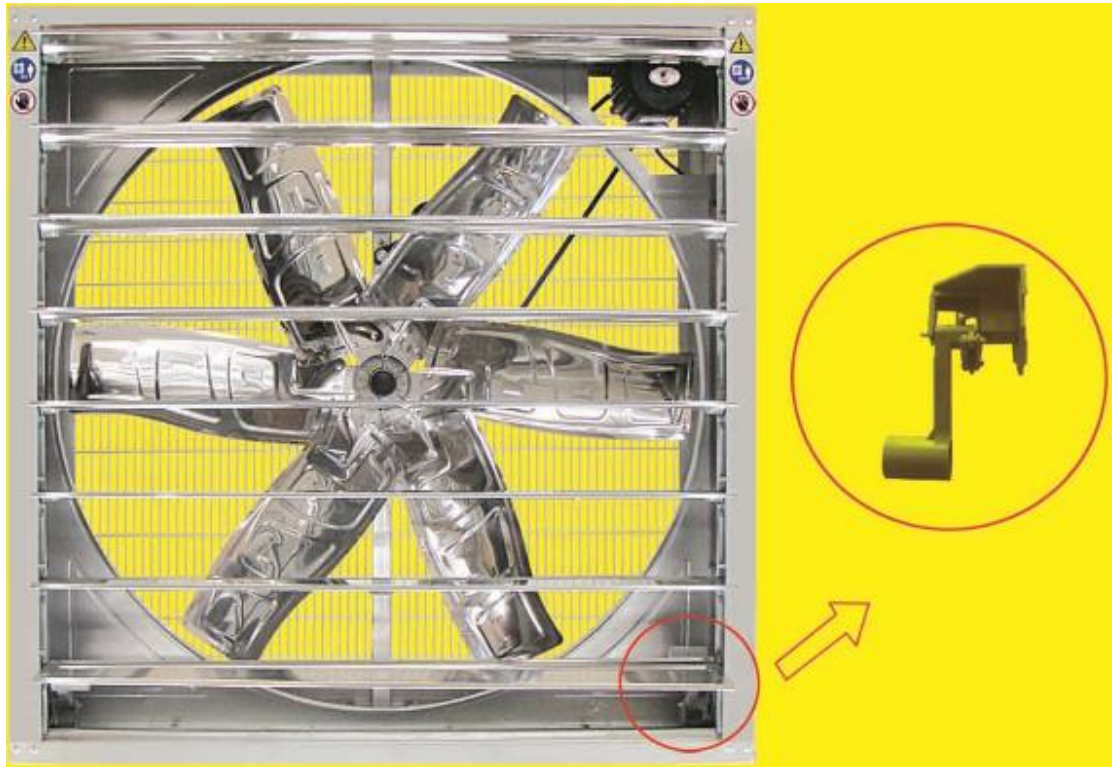

Two kinds of temperature control system, computer control and digital display control.

Automatic control of air input, hot air output and environment temperature.

Unique overall thermal insulation design, lowest heat loss.

Combustion chamber is made of high temperature resistant cast-steel tube with special design.

Long service life, high thermal efficiency of 90%.

Features:

The Automatic Oil-Burning Heater, developed by our scientific and technical personnel with high energy consumption, is made of high temperature resistant stainless steel tube and boiler plate, Unique secondary heating, high thermal efficiency, warming up quickly, semi-automatic temperature control, easy for installation.

Application:

Widely used in greenhouse, poultry house, hog house, workshop and mine for heating and drying.

Main technical parameters:

Technical date	unit	JLF-5	JLF-10	JLF-20	JLF-30
Heat output	kcal/h	50000	100000	200000	300000
Outlet temperature of air	°C	80-150	80-150	80-150	80-150
Power	KW	1.25	2.35	4.55	4.6
Voltage	V	380/220	380/220	380/220	380/220
Outer size	mm	1250X800X1200	1500X950X1400	2000X1200X1600	2300X1300X1900
Weight	KG	750	1150	1650	2100
