

Plant Support Clips

We supply the variety of ***plant clips***: orchid clips in different sizes and colors, tomato clips in different shapes, grafting clips in different models, and more models of support clips for other plants.

The orchid clips are used for orchids plant supports in the garden and greenhouse, and most for phalaenopsis flower, to connect the stems of flowers onto the plant stakes, they help the plant grow up better, and also help you display orchid more beautiful. We supply various sizes and colors of orchid clips.

The plant supporting clips connect the stems and branches of plants onto the plant stakes, protect the plant against wind damage, they are gentle, no harm to plants, and help the plant grow up better. Also we have various models for your choice, these plant clips are used for flowers and other vine plants in the garden and greenhouse.

The tomato clips have the different shapes in the round, the arch, and hooks. The tomato clips in round shape support the plants throughout their growth greatly, the twine goes through the back of the clip and fixed to the plant trellis, it connects tomato plants to the trellis easily. And the clips materials are biodegradable available. The tomato clips in arch are used to prevent the stems breaking when fruit becomes too heavy. And these plant arches clips help dramatically increase the fruit size, therefore also increasing the higher productivity. They are not only as tomato supports, also as cucumber, peppers and other fruits and vegetable plants supports.

The plant support hooks are attached to string, and the hook are placed around a stem to support the fruits and vegetables, such as tomatoes, cucumbers, peppers and other plants. Another kind of plant hooks with string, you can decide yourself the length of free fall. The hook in 18cm is used in lower greenhouses or slow growing crops, the hook in 22cm is used in higher greenhouse, for cucumbers and other faster growing crops.
